

Figure 22. Aquatic Habitats at the Project Site

Figure 23a. Candidate Habitat Mitigation Sites

Site E – about 75-90 feet wide, 1,200 feet long (~2 acres) of existing coyote brush scrub, roadside weeds, patches of coastal sage scrub, and several pepper trees. Primary restoration treatments: remove weeds and replace with coastal sage scrub in dry areas; plant riparian trees near bank for shading creek; plant oaks along margins of riparian zone.
